In this exercise, you will create a program that reads words from the user until the user enters a blank line. After the user enters a blank line your program should display each word entered by the user exactly once. The words should be displayed in the same order that they were first entered. For example, if the user enters:

first

second

first

third

second

then your program should display:

first

second

third

Given a string *S* which is of the format *USERNAME@DOMAIN.EXTENSION*, the program must print the *EXTENSION*, *DOMAIN*, *USERNAME* in the reverse order.

**Input Format:**

The first line contains *S*.

**Output Format:**

The first line contains *EXTENSION*.

The second line contains *DOMAIN*.

The third line contains *USERNAME*.

**Boundary Condition:**

1 ≤ Length of *S* ≤ 100

**Example Input/Output 1:**

Input:

Write a program that takes as input a string (sentence), and returns its second word in uppercase.

For example:

If input is "Wipro Technologies Bangalore" the function should return "TECHNOLOGIES"

If input is "Hello World" the function should return "WORLD"

If input is "Hello" the program should return "LESS"

NOTE 1: If input is a sentence with less than 2 words, the program should return the word "LESS".

NOTE 2: The result should have no leading or trailing spaces.

**For example:**

Input	Result
Wipro Technologies Bangalore	TECHNOLOGIES
Hello World	WORLD
Hello	LESS

**Answer:** (penalty regime: 0 %)

```
1 a=input("")
2 b=a.split()
3 if len(b)<2:
